Abstract: The advance machine and high-technique equipment will dominate the continuously developed secondary industry year by year from their exhibiting GDP occupation, so the relevant making update and research can be required more in the views of occupying the instructing role in the world day by day according to upgrading the actual and virtual demand originated through continually practising those machines in big project like digging the tunnel and under-sea high-speed one by us to make the modernization early realizing the aim like shield tunneling machine made by China. Therefore, the oversea sale those big machine will grasp the main task for us to increase more foreign dollars as a reserved capital adding the foreign currency. In addition, the research and development study the more kinds of those machines to satisfy the international buyer and orders in expo holding in every year to exchange the information and ransaction behavior updated. So the big country owns heavy machine will increase our making producing kinetic energy and subsequent setting machine in abroad for them to use in cultivating under-ground metro construction for making convenient subway utilities in light of strategic planning by government and market. At the same time, the high-speed-railway may shorten the time between two stations largely because the maximum speed can attain 300km/hr become the three times compared with the traditional-green-one. For example, the time between Beijing-Shanghai shortens four hours that may mean the work arrival-depart may be completed with one day from two~three days originally. Therein, those slowly work is changed by the rapidly one so as to improve the work-efficiency in modern society where we have so many things to do daily for negotiating with other businesses and sale and buy etc. many kinds within one days. We should appreciate the wider workers and engineers for us to share the profitability as soon as early making us to know what the best service it is at all. The other one may be cheap price with which the high-speed railway can attain directly from departure to destination one temporarily stopped in small stations insides. Up to now the more speed railway is to be searched continuously with attaining 400~500Km/hr that really make the distance more short than now like an airplane speed.

Introduction

With regards to continuing to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. At the same time, the robot etc innovation machine can help us to process many things from workshop, public occasion to medical & even family, so that the as many as them need us to make continuously to help doing some key aspect like work as welding integrated-circuit chip, movement with materials & doing cuisine and housework even flatter with older man. Therefore, the more robots made by factory are to afford the inestimable perspective for serving human being comfortably. We should constantly provide the substance & logical chip to maker for the sake of producing humanoid-robot specially and continually to realize the modernization and commercialization in near future. Some materials are to affect the product longevity and property so that more searching about it will be necessary through scientists and engineers who burden heavy responsibility for the sake of enhancing its performance and longevity besides its high-quality with low making cost.

The auto as an important secondary industry has an exceptional role in one province and country so that it is to be underscored one in national GDP value where the more amount and quality needs to be granted. There would be so many ones made by Chinese main manufacturer specially in NEV(new energy vehicle) that is now very prevalent in society market included the domestic one and abroad one. So that the abroad market requirement is to enhance year after year that means there is more orders by them to be given us to produce those electric ones sustainably. Following that international demands from various nations the new brands are to be urgently demanding and ascend its number from different models to different miles continuously. That the more many auto sells to abroad country means there may be more necessary provision from various provinces and cities makers frequently. Thereby, our steel industrial system can be endured a heavy experience whether it can tolerate the more and more launch quantity year by year. At the same time, the excellent performance can endure to what time so the sustainable research and those steel materials can maintain what degree. Probably after ten years whether the advantageously technical reservation can change Chinese auto into the world auto market subsequently for us to bear and make an endeavour breaking through the international brands. [1~21]

Discussions

With regards to prevailing climate change and its result public sanitation the clean emitting substance must be decreased largely from current fossil fuel to renewable one eventually and gradually so the clear atmosphere may be created by ourselves accounted for guaranteeing the earth circumstance eventually. The much endeavour would be done from company and government sides collaborative methods upon promise contract for better air atmosphere day by day urgently. As we knew the much carbon oxide etc. detriment gas producing from flaming engine of motor like traditional one with gasoline and diesel where the energy resource may be exploited by us too much. If those petroleum can be used in other place like plastic product etc. high-molecule polymer the situation will be better in spite of their trash dealing still is a big problem. Thereby, the suitable dealing with the petroleum processed product may become a long-term matters meeting in front of us who can search for new useful plastic procedures and composition to make an innovation one at all that is about to become a highlight in future chemical industry. [22~24]

Five permanent members' solar energy generation analysis

The solar energy generation y-o-y growth value in 2019~2020 might provide 40%~19% by Russia~USA accordingly in 2020 to manifest former the first occupation there in light of Figure 1. Meantime, the solar energy generation amount might afford 2~142 billion degrees by them accordingly to show the USA exceeding Shijiazhuang one top one. In contrast, the China maintained the top solar energy generation amount with 283 billion degrees in 2020 exceeding USA that meant the solar generating electric amount attained 0.55° per capita &per day in China while the USA maintained 1.3° per day &per capita with 2.5 time variation between them.

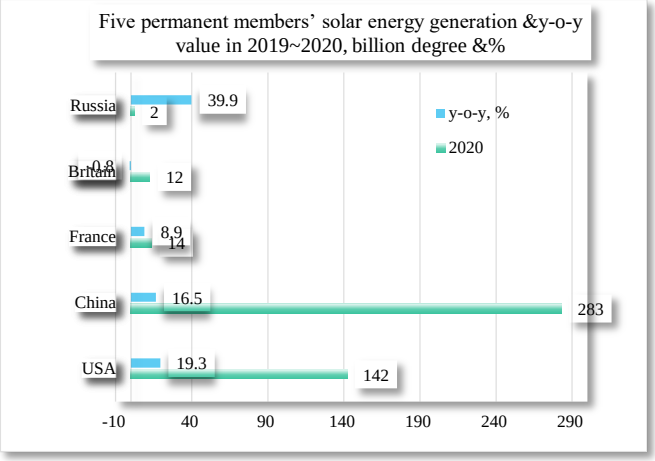

Figure 1 Five permanent members' solar energy generation &y-o-y value analysis. [1]

Chinese top provinces &India GDP change

The Chinese top provinces GDP might show 6.3 billion dollars &8 billion dollars by Guangdong province &Shandong province accordingly in 1983 in light of Figure 2 to manifest the latter strong economic momentum. The y-o-y growth value would exhibit 31% &41% by them correspondingly evidenced the Shandong province higher developed pace.

Introduction to Transactions on engineering and computing sciences

We recently came across your publication, published in "Journal of Electronic Information Systems Engineering". As a researcher contributing to advancements in this Research Area, your work reflects the quality and innovation that we strive to publish in Transactions on Engineering and Computing Sciences (TECS). With this in mind, we would like to extend a personal invitation for you to submit your next original research article, review paper, or technical contribution for consideration in Volume 14, Issue 6 of our journal. For over 14 years, TECS has provided an international platform for the publication of high-quality research in engineering, computing, and emerging technologies. We are committed to ensuring that accepted research is published promptly, widely accessible, and easily citable. [3] So that we are delighted to invite your submission to our journal contributing to both sides, we are going to publish your valuable paper quickly after passing through the peer reviews course by expert.

Innovation countries ranking in 2026

© Copyright GRS Publisher. All Rights Reserved

The innovation countries ranking in 2026 would offer No. 1~10 by Switzerland~China accordingly in light of Figure 3 manifested the Swedeṇ USAṆ South Koreạ Singapore occupying the secondṇ thirdṇ fourthṇ fifth correspondingly following Switzerland.In addition, according to <Global innovation index in 2026> it would be evaluated that the global research &development expenditure in 2025 actually increased above 3.3%, and increase 3.6% in 2026 with predicting to attain 3.5 trillion dollars. [4]

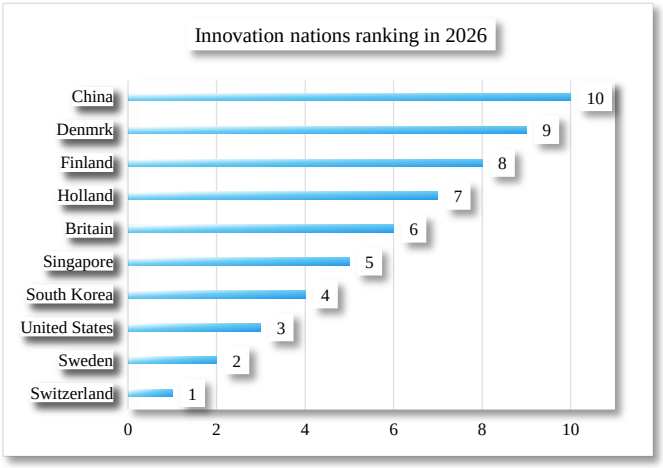

Figure 3 Innovation countries ranking in 2026. [2]

Chinese Jiangsu &Zhejiang provinces GDP analysis

The Chinese Jiangsu &Zhejiang provinces GDP might afford 309 billion dollars &223 billion dollars by them accordingly in 2006 in light of Figure 4 to manifest the former strong economy status. The y-o-y value might offer 69% &77% by them correspondingly manifested the latter Zhejiang one higher developed pace.

Conclusions

The advance machine and high-technique equipment will dominate the continuously developed secondary industry year by year from their exhibiting GDP occupation, so the relevant making update and research can be required more in the views of occupying the instructing role in the world day by day according to upgrading the actual and virtual demand originated through continually practising those machines in big project like digging the tunnel and under-sea high-speed one by us to make the modernization early realizing the aim like shield tunneling machine made by China. Therefore, the oversea sale those big machine will grasp the main task for us to increase more foreign dollars as a reserved capital adding the foreign currency. In addition, the research and development study the more kinds of those machines to satisfy the international buyer and orders in expo holding in every year to exchange the information and transaction behavior updated. So the big country owns heavy machine will increase our making producing kinetic energy and subsequent setting machine in abroad for them to use in cultivating under-ground metro construction for making convenient subway utilities in light of strategic planning by government and market. At the same time, the high-speed-railway may shorten the time between two stations largely because the maximum speed can attain 300km/hr become the three times compared with the traditional-green-one. For example, the time between Beijing-Shanghai shortens four hours that may mean the work arrival-depart may be completed with one day from two~three days originally. Therein, those slowly work is changed by the rapidly one so as to improve the work-efficiency in modern society where we have so many things to do daily for negotiating with other businesses and sale and buy etc. many kinds within one days. We should appreciate the wider workers and engineers for us to share the profitability as soon as early making us to know what the best service it is at all.

Ethic Declarations

The authors declared that there were not conflicts of interest to disclose.
