Abstract: The advance machine and high-technique equipment will dominate the continuously developed secondary industry year by year from their exhibiting GDP occupation, so the relevant making update and research can be required more in the views of occupying the instructing role in the world day by day according to upgrading the actual and virtual demand originated through continually practising those machines in big project like digging the tunnel and under-sea high-speed one by us to make the modernization early realizing the aim like shield tunneling machine made by China. Therefore, the oversea sale those big machine will grasp the main task for us to increase more foreign dollars as a reserved capital adding the foreign currency. In addition, the research and development study the more kinds of those machines to satisfy the international buyer and orders in expo holding in every year to exchange the information and transaction behavior updated. So the big country owns heavy machine will increase our making producing kinetic energy and subsequent setting machine in abroad for them to use in cultivating under-ground metro construction for making convenient subway utilities in light of strategic planning by government and market. At the same time, the high-speed-railway may shorten the time between two stations largely because the maximum speed can attain 300km/hr become the three times compared with the traditional-green-one. For example, the time between Beijing-Shanghai shortens four hours that may mean the work arrival-depart may be completed with one day from two~three days originally. Therein, those slowly work is changed by the rapidly one so as to improve the work-efficiency in modern society where we have so many things to do daily for negotiating with other businesses and sale and buy etc. many kinds within one days. We should appreciate the wider workers and engineers for us to share the profitability as soon as early making us to know what the best service it is at all. The other one may be cheap price with which the high-speed railway can attain directly from departure to destination one temporarily stopped in small stations insides. Up to now the more speed railway is to be searched continuously with attaining 400~500Km/hr that really make the distance more short than now like an airplane speed.

Introduction

With regards to continuing to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many

This is an open access article under the CC BY-NC 4.0 license

sophisticated features and achievements during his a certain time' s innovation research. At the same time, the robot etc innovation machine can help us to process many things from workshop, public occasion to medical & even family, so that the as many as them need us to make continuously to help doing some key aspect like work as welding integrated-circuit chip, movement with materials & doing cuisine and housework even chat with older man. Therefore, the more robots made by factory are to afford the inestimable perspective for serving human being comfortably. We should constantly provide the substance & logical chip to maker for the sake of producing humanoid-robot specially and continually to realize the modernization and commercialization in near future. Some materials are to affect the product longevity and property so that more searching about it will be necessary through scientists and engineers who burden heavy responsibility for the sake of enhancing its performance and longevity besides its high-quality with low making cost.

The auto as an important secondary industry has an exceptional role in one province and country so that it is to be underscored one in national GDP value where the more amount and quality needs to be granted. There would be so many ones made by Chinese main manufacturer specially in NEV(new energy vehicle) that is now very prevalent in society market included the domestic one and abroad one. So that the abroad market requirement is to enhance year after year that means there is more orders by them to be given us to produce those electric ones sustainably. Following that international demands from various nations the new brands are to be urgently demanding and ascend its number from different models to different miles continuously. That the more many auto sells to abroad country means there may be more necessary provision from various provinces and cities makers frequently. Thereby, our steel industrial system can be endured a heavy experience whether it can tolerate the more and more launch quantity year by year. At the same time, the excellent performance can endure to what time so the sustainable research and those steel materials can maintain what degree. Probably after ten years whether the advantageously technical reservation can change Chinese auto into the world auto market subsequently for us to bear and make an endeavour breaking through the international brands. [1~20]

Discussions

The auto will play an important role as a heavy secondary industrial pillar whose amount and sale amount is to be evaluated again here for the sake of promoting its strategic planning task in more than ten years, so the prevalent NEV(New energy vehicle) series can present one region and one nation's secondary industrial reformation at all for our engineer scientist &specialists to chase together as an eminent new force one. The energy used in vehicle may transform into the renewable one from nature where the low-carbon one can be applied occupying the first leadership to sell from domestic market to overseas one sustainably and continually besides that those auto has low price advantageous privilege made in China. The market occupation may promote the more many electric car amount and y-o-y(Year over year) growth value as well to make knowing how to produce better and high-quality ones continually from our manufacturer to huge oversea market for acquiring more sale order and making the earth circumstance to be cleaner than former. [21~24]

USA states GDP analysis

The USA states GDP analysis could offer 396 billion dollars ~315 billion dollars by Ohio~Georgia in 2000 in light of Figure 1 manifested the former Ohio state strong economy momentum. The y-o-y growth value might evidence 2%~4.5% by them illustrated the Georgia higher developed pace.

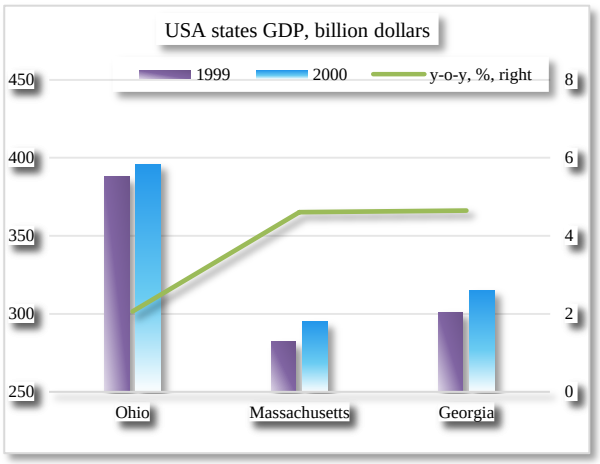

Figure 1 USA states GDP analysis. [1]

Furthermore, the USA states GDP analysis could offer 373 billion dollars ~459 billion dollars by Ohio~Virginia in 2013 in light of Figure 2 manifested the latter strong economy momentum. The y-o-y growth value might evidence 2.5%~1.6% by them illustrated the former higher developed pace.

At the last, the USA states GDP analysis could offer 1,530 billion dollars ~536 billion dollars by Texas~New Jersey in 2013 in light of Figure 3 manifested the former Texas state strong economy momentum. The y-o-y growth value might evidence 4%~2% by them illustrated the Zhejiang province exceeding the Massachusetts higher developed pace with 5.2% then.

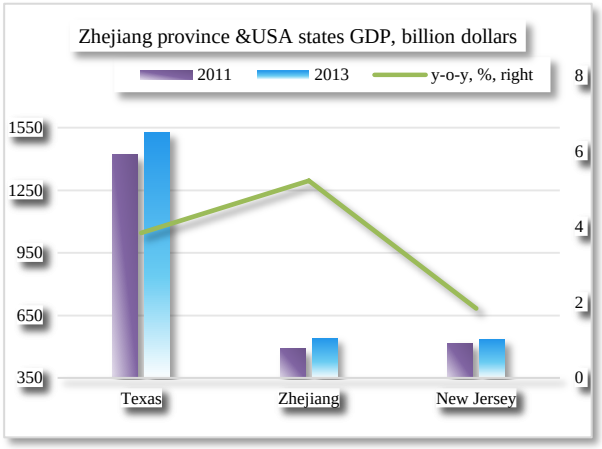

Figure 3 Zhejiang province &USA states GDP analysis. [1]

Hebei &Anhui provinces' GDP analysis

The Hebei &Anhui provinces' GDP analysis would offer 1.7~6.6 billion yuan by Wuhu~Shijiazhuang cities accordingly in 1984 to illustrate the latter strong economy status. The ones above 5 billion yuan would be Handan, Tangshan, Baoding following Shijiazhuang city with 5.8 billion yuan, 5.4 billion yuan, 5 billion yuan respectively to show their high economic strength.

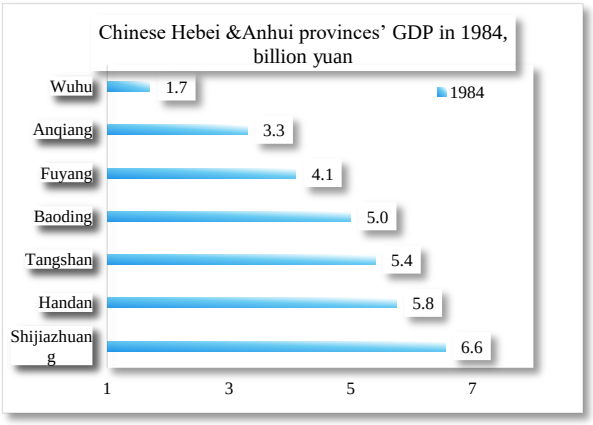

Figure 4 Hebei &Anhui provinces' GDP analysis. [2]

In summary, the more green automobile would be created to enter to the world market for maintaining the benefit opportunity fist occupation continuously from ten year ago that China already master the key cutting-edge-field eg. chargeable battery performance and miles distance in light of one charging time from the south to north area. The hydrogen fuel battery is to be searching for from several decade years ago to occupy the future promise candidate position after more than decade years for our engineers and specialists to think about its future usefulness widely from now on. The BYD blade battery was found in March 2020 called as "Lithium iron phosphate" which has more powerful application in BYD vehicle types. That battery has adopted the best gravity ratio discharged capacity and has been fatigue life 1MKm and recycle life trial times attained above 3,000. So those advancement product can change the key limitation from traditional performance accounting for producing new &high technique to drive the current limitation capacities that may enhance the GDP value a certain. We should continue to develop that best performance largely from the laboratory to research &development entirely supplying chain through producing & searching sides collaborated relationship by them together.

Conclusions

The advance machine and high-technique equipment will dominate the continuously developed secondary industry year by year from their exhibiting GDP occupation, so the relevant making update and research can be required more in the views of occupying the instructing role in the world day by day according to upgrading the actual and virtual demand originated through continually practising those machines in big project like digging the tunnel and under-sea high-speed one by us to make the modernization early realizing the aim like shield tunneling machine made by China. Therefore, the oversea sale those big machine will grasp the main task for us to increase more foreign dollars as a reserved capital adding the foreign currency. In addition, the research and development study the more kinds of those machines to satisfy the international buyer and orders in expo holding in every year to exchange the information and transaction behavior updated. So the big country owns heavy machine will increase our making producing kinetic energy and subsequent setting machine in abroad for them to use in cultivating under-ground metro construction for making convenient subway utilities in light of strategic planning by government and market. At the same time, the high-speed-railway may shorten the time between two stations largely because the maximum speed can attain 300km/hr become the three times compared with the traditional-green-one. For example, the time between Beijing-Shanghai shortens four hours that may mean the work arrival-depart may be completed with one day from two three days originally. Therein, those slowly work is changed by the rapidly one so as to improve the work-efficiency in modern society where we have so many things to do daily for negotiating with other businesses and sale and buy etc. many kinds within one days. We should appreciate the wider workers and engineers for us to share the profitability as soon as early making us to know what the best service it is at all.
