Abstract: With surging time of technique seeking to change the world answer will be important task for us to chase due to meeting a new technique challenge with high and advanced mind to weapon our brain and bodies. The eminent role with the innovation one affords more sophisticated and directional task day be day through exerting our specialist and scientists actively act on exploring the new function sustainably. We should foster the excellent engineer from the research &development department in a maker and directly from the graduate in a good university for the sake of consisting in continuously workable capacity defined in a field. Therefore, the educating the talent from graduated in a better department may occupy an significant influence sustainably and constantly producing those new ones with better performance and quality for serving society urgently and immediately whose leader may pay more attention to educating those new graduates for choosing the best one having wisdom and brisk feature in the workshop. The more higher level ones are to be owned the more advancement product can be produced by the department continuously produced now whose role may be directly hitting the destination as soon as possible. Thereby, the better from learning in college the more achievement can be acquired by the specialist leading in a manager position making us to know how those new ones may be worked all the course of items. The succeeding ones have to own himself method to be promoted from basis one to advanced one in a manufacturer with the help of the specialist advocating and approvals. On the other side, one team might form one task to produce the future new function product so that the many ones may be completed by a group to reserve more non-mature explorations waiting for the transaction by the managers for the sake of having a space time to balance the market requirement controlled the actual speed. From the sample to mature product the many joints can be passed through the sample producing trial reviews reproducing until the best conditions may be attained besides that the customer is to be approved at all. So the high-technique occupation will influence the GDP(Gross domestic product) value growth continuously from low one to high one for seeing the ultimately change varied from many years ago and other developed region &nations. It is considered that the high-technique business can be occupied what degree from initial one to moderate stage will be an important factor for us to think over the key growth speed except the GDP general amount. At the same time, the foreign trade exportation and importation may dominate additional significant effectiveness in transforming the secondary industry into tertiary industry whose effectiveness can exceed the our original imagination and judgement. The more those high-technique products and equipment may lead to the pillar role in one region and nation total GDP value, therefore the more amount foreign trade exportation product will create more capital from dealing with those many products.

Introduction

With regards to continuing to work the advancement science & technology the sophisticated product and following effectiveness may be birthed and advocated gradually and eventually. As a scientist he must proceed his searching to push new measures for the sake of updating the traditional theory & experiment largely. A paper might conclude in the entire big mind and subsidiary diversities to exhibit his performance in front of public readers that contains many sophisticated features and achievements during his a certain time's innovation research. At the same time, the robot etc innovation machine can help us to process many things from workshop, public occasion to medical & even family, so that the as many as them need us to make continuously to help doing some key aspect like work as welding integrated-circuit chip, movement with materials & doing cuisine and housework even chat with older man. Therefore, the more robots made by factory are to afford the inestimable perspective for serving human being comfortably. We should constantly provide the substance & logical chip to maker for the sake of producing humanoid-robot specially and continually to realize the modernization and commercialization in near future. Some materials are to affect the product longevity and property so that more searching about it will be necessary through scientists and engineers who burden heavy responsibility for the sake of enhancing its performance and longevity besides its high-quality with low making cost.

The auto as an important secondary industry has an exceptional role in one province and country so that it is to be underscored one in national GDP value where the more amount and quality needs to be granted. There would be so many ones made by Chinese main manufacturer specially in NEV(new energy vehicle) that is now very prevalent in society market included the domestic one and abroad one. So that the abroad market requirement is to enhance year after year that means there is more orders by them to be given us to produce those electric ones sustainably. Following that international demands from various nations the new brands are to be urgently demanding and ascend its number from different models to different miles continuously. That the more many auto sells to abroad country means there may be more necessary provision from various provinces and cities makers frequently. Thereby, our steel industrial system can be endured a heavy experience whether it can tolerate the more and more launch quantity year by year. At the same time, the excellent performance can endure to what time so the sustainable research and those steel materials can maintain what degree. Probably after ten years whether the advantageously technical reservation can change Chinese auto into the world auto market subsequently for us to bear and make an endeavour breaking through the international brands. [1~17]

Discussions

With regards to prevailing climate change and its result public sanitation the clean emitting substance must be decreased largely from current fossil fuel to renewable one eventually and gradually so the clear atmosphere may be created by ourselves accounted for guaranteeing the earth circumstance eventually. The much endeavour would be done from company and government sides collaborative methods upon promise contract for better air atmosphere day by day urgently. As we knew the much carbon oxide etc. detrimental gas producing from flaming engine of motor like traditional one with gasoline and diesel where the energy resource may be exploited by us too much. If those petroleum can be used in other place like plastic product etc. high-molecule polymer the situation will be better in spite of their trash dealing still is a big problem. Thereby, the suitable dealing with the petroleum processed product may become a long-term matters meeting in front of us who can search for new useful plastic procedures and composition to make an innovation one at all that is about to become a highlight in future chemical industry. [18~20]

The Dalian city &Jiangsu province cities GDP analysis

The Dalian city &Jiangsu province cities GDP analysis might afford 8.3 billion yuan~3.4 billion yuan by Suzhou city~Yangzhou city in 1981 accordingly indicate the former strong economy strength in light of Figure 1. The y-o-y value would offer 8%~13% by them correspondingly evidenced the Yangzhou city the highest developed pace beyond the Zhenjiang city with 26%.

Stocks price vibration

The stocks for recommended would be like below three that would be <Hong Sun> 000525, <Shenyang Lathe> 000410, <Luzhou Laojiao> 000568. another two might be as <Atlantic> 600558 for military industry, <Jianshe Industry> 002265 for military informatization. [2]

Introduction to the European Journal of Law and Political Science

As to the colleague, the European Journal of Law and Political Science is currently accepting manuscripts for upcoming issues. We welcome original research articles, review papers, and case studies that contribute new insights across all areas of Law and Political Science and related disciplines. All published articles are peer-reviewed and made openly available to readers worldwide. To submit your work or recommend a colleague's paper, visit our submission page. Thereby, we are pleased to invite your submission to this journal for contributed to both sides, and we are to publish your valuable one immediately after passing the reviews by us. [3]

Mongolia &Chinese autonomous regions GDP analysis

The Dalian city &Jiangsu province cities GDP analysis might afford 22.4 billion dollars~12 billion dollars by Guangxi &Xinjiang autonomous region in 1995 accordingly indicate the former strong economy strength in light of Figure 2. The y-o-y value would offer around 26% ~24% by them correspondingly evidenced the Inner Mongolia the highest developed pace with 30%.

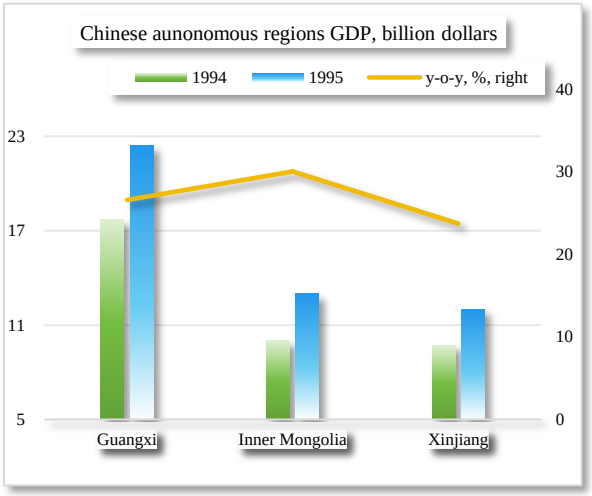

Figure 2 Chinese autonomous regions GDP analysis. [2]

Moreover, the Dalian city &Jiangsu province cities GDP analysis might afford 2.6 billion dollars~0.84 billion dollars by Ningxia &Tibet autonomous region in 1995 accordingly indicate the former strong economy strength in light of Figure 3. The y-o-y value would offer around 30% ~20% by them correspondingly evidenced the Ningxia following Mongolia the highest developed pace with 40%.

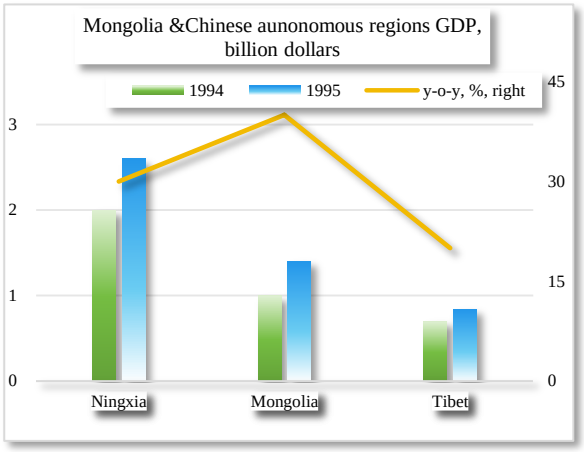

Figure 3 Mongolia &Chinese autonomous regions GDP analysis. [2]

Moreover, the Dalian city &Jiangsu province cities GDP analysis might afford 2.9 billion dollars~0.3 billion dollars by Xinjiang &Tibet autonomous region in 1988 accordingly indicate the former strong economy strength in light of Figure 4. The y-o-y value would offer around 16% ~7% by them correspondingly evidenced the Xinjiang one the highest developed pace with 16.6%.
